High prices of oil in Kenya and the role of EPRA

The Kenyan prices have been increasing for the better part of 2021 and this is being felt across all Kenyan sectors. Oil prices theoretically have had a link to all economic sectors which is being translated into high costs of living for the Kenyan households. The main question on Kenyans' minds is why are these prices high and what role is the EPRA playing in regulating them. Well, for one, the EPRA is a government parastatal tasked with managing the prices of oil and its products here in Kenya so as to stabilize the economy.
